

ref. 99071091

SET OF SUPPORTS FOR CROSSRAMMING XRS01

TOEBEHOREN REDDINGSMATERIAAL

DESCRIPTION

Set of ram rests for cross-ramming, a technique that creates space when parts of the vehicle are deformed and impede safe release of the patient. With the aid of a ram, the car structure is pushed back into its original shape. The set of two supports helps to distribute the force of the ram over a larger area and prevents it from pushing through the car structure.

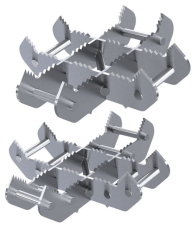

Supplied as standard with:

1 x model XRS01S Small

1 x model XRS01L Large

TECHNICAL SPECIFICATIONS

- Grip teeth on both sides of ram struts for maximum grip on pick-up area
- Max. load: 98.1 kN (10 tonnes)
- Material: bright galvanised steel surface (durable and corrosion resistant)
- Dimensions: 415 x 415 x 172 mm
- Weight: 12.5 kg
